

## YEAR 10T Wood

### OVERVIEW

This subject is designed as a taster to the more advanced Building & Construction course for the following year. At the end of the subject they will have an insight into the basic principles of working with timber framed structures.

Year 10T Wood is conducted over two periods per week.

The students are first introduced to basic wood workshop and hand-tool health & safety.

The students then work individually on small simple timber projects utilising framing pine. They get a taste of what it is like to work with wood, specifically how to accurately measure, cut and join timber. Later in the year they have the opportunity to work collaboratively on more complex projects related to building and construction.

All of the work is undertaken in the classrooms and modern workshop we have here at NCAT.

### ASSESSMENT

The students are assessed on the basis of what they are able produce and the skills they can demonstrate in doing so.

### SUBJECT PREREQUISITES

There are no prerequisites for this subject
